

INSTALLATION INSTRUCTIONS

SG1219

BEFORE YOU START

Items Required:

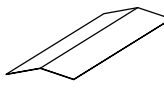

Tools					
	gloves	Safety Glasses	Shoes	Riveting Gun	Sleeve
Tools					
	Power drill	Screw driver	Pencil	Tape Measure	Ladder

- Clear a working area to allow access on 4 sides. A raised work surface will make assembly easier.
- Please choose a dry and calm day to start assembly. Do not attempt installation in rainy or windy day.
- **Keep roof clear of leaves and snow with long handled, soft-bristled broom. Heavy amounts to snow on roof can damage building, making it unsafe to enter.**
- All parts are identified so when working through the instructions page by page the diagrams show where each part is positioned.
- Before starting, to avoid any accidental injury, we recommend the use of gloves to protect your hands, safety glasses to protect your eyes and shoes or boots to protect your feet.
- Please keep children away from your construction site.
- Most assembly can be completed by one person, assistance may be needed when you reach the erection stage.
- Cleaning should be performed as often as is required to remove any dirt, salt, and pollutants.
- Please note: Some local government authorities have rules & regulations on shed installation and you may need approval to erect this shed.

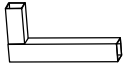

STEPS:

1. Unpack all components from the carton and lay outside your work area and check parts against the part list on the next page.
2. Refer to page "HOW PANELS ARE JOINED".
3. When completed place shed in position and anchor securely to the ground.
4. Clean up all metal pieces, rivets and screws.

ASSEMBLY OF THE DOOR MAY REQUIRE THE FOLLOWING PARTS

				
A	S	C	M	
				
N	O	P	GR1	GR2
				
S12	S13			

SHED ASSEMBLY - ROLL UP DOOR

SHED ASSEMBLY - ROLL UP DOOR

SHED ASSEMBLY - ROLL UP DOOR

Bind the roller door before rotating.

Idle about two circles in the direction of the arrow, if the tightness is moderate, insert the roller door into the guide rail. Pull the door edge softly with hands, infer to the top of the door, and see if the strength is proper. If you think the strength is improper, secede from the guide rail, then increase or decrease torque again. Do as the above approach until the roller door pushes and pulls smoothly.

INCREASE THE TORQUE

SHED ASSEMBLY - ROLL UP DOOR
